**GEOG 4086 Urban Planning (3,2,1) (E)**

This course introduces students to the field of urban planning. What are the concerns of urban planners? How do they make sense of the problems? What sort of skills is required of urban planning professionals? What are the effects of the urban planning process on the development of our urban areas? Initially, this course approaches urban planning by a historical analysis. We therefore, first, study how cities in Britain grew and developed since the industrial revolution. In doing so, we also trace the beginnings of "modern" Western urban planning, both as advocacies and "ideas" and as actual practices. In addition, the nature of urban planning, especially for the more recent periods, will be highlighted. Based on this preliminary understanding, we proceed to take stock of the various theories built to understand urban planning practices. In other word, the second part of the course deals with planning theory.

The course takes a comprehensive survey of the Chinese energy sector, including the resource endowment, energy policy since the 1980s, the major energy industries like oil, coal, natural gas, electricity—HEP and nuclear included—and the international energy trade of China. Current issues such as the Three Gorges Dam and the West-East Pipeline are also dealt with.

The second part presents details about the nature, distribution and utilization of natural resources in China. The environmental conservation and sustainable development in relation to natural resources are also discussed in the subject.
