

into new artistic or functional areas. Accordingly the aim of the course is to interpret the human body as an interface for artistic expression.

The course offers an introduction to the broad scope of wearables and covers basic techniques for designing, pattern making and pattern alteration such as square blocking, contour sectioning and pivoting, which enables learners to develop creative concepts into wearable designs.

Building on to this foundation, through studio exercises, student research and studio practice the students are invited to explore various approaches, concepts and materials for the creation of wearables. This knowledge shall be applied to design a set of wearable pieces or body extensions from the very first design sketch to a finished prototype, taking in the contemporary discourse on the topic.

Wearables connect the three-dimensional design-area with disciplines like theatre, film or performance art. Most obvious applications are theatre-costumes, but wearable design-pieces that are based on a particular view of the world or a particular spatial environment are rather common throughout the art- or design-scene.

VART 2246 Small Metal Jewellery (3,4,0) (E)

Prerequisite: VART 1006 Introduction to Visual Arts II/Visual Arts Practice II or any GDCV courses offered by AVA or any Visual Arts courses

Mankind has developed personal decoration and ornaments for thousands of years. Jewellery has always been an expression and reflection of its epoch, its social structures and cultural standards. Since the past fifty years, jewellery is now no more the privilege of the wealthy, as the social structure of contemporary societies has broadened considerably, and allows the concept of jewellery to be understood far more universal: In a contemporary sense, jewellery has become a collective noun for body-related objects.

This is an introductory course in jewellery making, with a focus on metalsmithing for small objects. It is designed to introduce non-ferrous metal as an expressive medium and to explore the unique properties it has to offer. Students will learn various ways of working metal, and how these techniques can be applied to the creation of small metal objects. Emphasis will be put on how these objects can be related to the human body. Basic 3D design concepts will be used to demonstrate these possibilities. The students will be introduced to the contemporary views of jewellery, and begin to appreciate jewellery as an art form.

Through studying this diversified art form, the students can broaden their appreciation of the world around their body. The students will develop a sense of scale, and will have an enhanced sensitivity in relating their work to the environment. They will also practice thinking in 3D.

VART 2255 Space and Site (3,4,0) (E)

Prerequisite: VART 1006 Introduction to Visual Arts II/Visual Arts Practice II or any GDCV courses offered by AVA or any Visual Arts courses

Next to “object” the central concept in three-dimensional visual arts is “space”. In opposite to objects however, the nature, essence, and the mode of existence of space, even the ultimate definition of space are still debated.

In this context “site” can be defined as spatial mark-making: by distinguishing a particular place within space through an intervention of any kind this location becomes a site.

Space and Site is a course dedicated to concepts and techniques necessary for all those designers and artists who want to work with space as a medium. It includes introductions to contemporary space-related theories and also some of the most important spatial designs of the 20th and 21st century. It also familiarizes participants with planning tools such as technical drafting, model making and virtual representations of space, as well as with the basic principles of constructions.

These acquired skills and knowledge will be practised in a number of small exercises and one medium-sized project at the scale of a city-furniture or small architectural object.

Upon completion of this course a participant will have the means to develop and conceptualize his/her spatial ideas and present

them adequately to an audience of professionals. Especially students who would like to continue their studies into three dimensional subject areas like exhibition design, and installation will benefit from this course.

VART 2256 Product Design (3,4,0) (E)

Prerequisite: VART 1006 Introduction to Visual Arts II/Visual Arts Practice II or any GDCV courses offered by AVA or any Visual Arts courses

Product design is a creative discipline, which combines art and technology, ideas and materials, to improve our daily lives, protect our health and create new opportunities for the industry. This course produces imaginative design ideas and solutions for small and large-scale industrial production.

The aim of this course is to provide knowledge and understanding of common and new materials used for designing new products and objects. It also introduces basic processes and methods used in industrial and product design manufacturing for these materials. Three different projects will be introduced to understand that the right choice of materials and processes is inseparably linked to the look and performance of any product.

This subject builds the foundation and hands-on experience indispensable to any other 3D related courses.

VART 2305 Art in the 20th Century I (3,3,0)

Prerequisite: VART 1306 Art and its Histories II

As visual artists, how we think, and how we understand the world around us, both affects and influences our creativity and the works we create. The art of the 20th century exemplifies this interplay between art, artist and society, marking a point of distinct artistic difference with the past and highlighting Modernity throughout culture and society. The responses to Modernity have incorporated new forms and expressions of visual art and developed a range of radical theories, attempting to define and contextualise the visual arts in a century of unprecedented global change.

Using the themes of Modernity as a platform—for example, revolution, gender, industrial advance—we will examine the shaping of visual art of the 20th century. Considering the relationships and affinities between varieties of media, and investigating the theories and language of visual art, we will learn to understand contextually and visually the often ambiguous terms of “Modern”, “Modernity” and “Modernism”.

This is a year course intended to offer the student a greater depth of understanding of issues, approaches and methodologies of art history and the interplay between visual art, the creative process and the influence of the political, cultural, economic and anthropological arenas of life.

VART 2306 Art in the 20th Century II (3,3,0)

Prerequisite: VART 2305 Art in the 20th Century I
