

GEOG 1200 Earth Systems: Atmosphere and Biosphere (3,2,1)

The first part introduces climatology. Emphases are placed on atmospheric motion and climate change. The second part is a comprehensive analysis of the development and characteristics of soil and vegetation on the Earth's surface. Emphasis is placed on their distribution, soil-plant interactions and their significance in human's use of land.

GEOG 1210 Globalization of Economic Activities (3,2,1)

This course introduces students to the world phenomenon of globalization of economic activities. It is imperative for students in Geography to be aware of the basic features and the processes of economic globalization: What is it? Who are the main actors behind it? How did it happen? What are the implications for the spatial organization of economic production and the patterns of urban agglomerations at various geographic scales: the world, the nation, and the region? This course aims at providing a systematic introduction to these basic features.

GEOG 1610 People and the Physical Environment (3,3,0)

Students are introduced to the processes and problems associated with the physical environment in which people live, and examines how humans, in turn, influence and control their surroundings. Contemporary problems such as global warming, ozone depletion and desertification are examined. Special emphasis is given to examples from Hong Kong and China. This course is not open to Geography majors.

GEOG 1620 Hong Kong and the Pearl River Delta: A Survey (3,2,1)

This course provides a comprehensive and lively guide to the history, culture, geography and economic development of South China. This objective is to be achieved by a series of well-organized lectures and tutorials. Field trips, both in Hong Kong and to the Pearl River Delta, which will provide an invaluable on-site experience to elaborate the types and magnitude of change in South China discussed in lectures, may be organized. It is hoped that this course will constitute an essential gateway to those wishing to acquire a deeper understanding of this dynamic corner of Asia.

GEOG 1630 Geography, Information Technology and Modern Life (3,3,0)

This is an introduction course to the application of geo-spatial information technology. It is designed as a complementary course for non-geography major students for the awareness and understanding of applications of modern technology to geographical issues. The course will emphasize the use of GIS, GPS and remote sensing to solve some common problems and issues in today's industry and the modern life of the society. The currently available resources of geographical data and data processing tools for various typical applications will also be introduced.

GEOG 1640 Energy, Environment and Sustainability (3,3,0)

Climate change and the depletion of energy resources are issues of major international concern in the contemporary world. The focus of this course is on the multiple and intricate relationships between energy, environment and sustainability issues. It allows students to fully understand the subject matter from both the natural science and social science perspectives. Through appropriate real-life examples, the course aims to guide students, in an exploration of viable alternative energy sources and to enable them to embark on a way of life that promotes a clean and sustainable use of energy resources. In addition to classroom learning, the teaching will be supplemented by field visits, demonstrations, group projects and debates.

GEOG 2005 Cultures, Peoples and Landscapes (3,2,1) (E)

The course examines how geographic location and people's cultural identities shape landscapes from both a physical setting and a symbolic construction point of view. Places or locations can be linked physically through processes of migration, tourism, trade, and investment, and represented (or "imagined") through media such as newspapers, film, music, art and literature. These processes are influenced by, and impact on, the natural and cultural landscapes.

GEOG 2006 Earth Systems: Shaping Landscapes (3,2,1) (E)

This course is complementary with GEOG 2016 Earth Systems: Atmosphere and Biosphere and introduces geomorphology and the main facets that have contributed to the study of landforms. Emphases are placed on: plate tectonic theory, as a framework to explain the major relief features of eastern Asia; on common geological materials and structures that control landscape in Hong Kong; and on the processes of weathering, erosion and deposition that produce contrasting landscapes.

GEOG 2007 Introduction to Quantitative Methods in Geography (3,2,1) (E)

This course provides an introduction into statistical analysis of geographic data. Through real-world examples from various topic areas of geography, students learn sampling methods, descriptive and inferential statistical techniques for analysing geographic data. Topics include hypothesis testing, spatial statistics, statistical relationships between variables, and how to generate, summarize and present geographic data, etc. The course will assist students in developing a knowledge basis for understanding more advanced methods of geographic analysis.

GEOG 2015 Cartography (3,2,2) (E)

Cartography is the art, science and technology of making maps. Maps are the communication media for geographers to express their views about our world, in a similar way that language is for literary authors. Understanding of map-making processes and mastering the skills of map-reading greatly enhance the presentation of geographical information in graphic format. Moreover, this format can be an effective tool for data analyses such as, for example, when examining the relationship between two distributions using simple transparent overlays. Students can apply such a mapping ability to their natural or social science courses or in their professional fields.

GEOG 2016 Earth Systems: Atmosphere and Biosphere (3,2,1) (E)

This course seeks to provide understanding of the ecosystem essentials and the atmospheric processes governing weather and climate. The first part is a comprehensive analysis of the characteristics of vegetation on the earth's surface. Emphasis is placed on their distribution, and their significance in human's use of land. The second part introduces climatology. Emphases are placed on energy flow and temperature, atmospheric moisture, atmospheric circulation, climate classification and climate change.

GEOG 2017 Globalization of Economic Activities (3,2,1) (E)

This is an introductory course on economic geography. Students are first introduced to the basic features of economic globalization and their geographic ramifications. The course then describes in some detail the major forces and processes that underlie global production shifts, identifying the main actors involved and outlining the implications for the spatial organization of economic activities at various geographic scales: world, nation and region.

GEOG 2025 Hong Kong and the Pearl River Delta: A Survey (3,2,1) (E)

This course provides a comprehensive and lively guide to the history, culture, geography and economic development of South China. This objective is to be achieved by a series of well-organized lectures and tutorials. Field trips, both in Hong Kong
