

CHEM 4898-9 Final Year Project I & II (3,0,9)

Prerequisite: Chemistry majors Year IV standing
To guide students in the development of research methodology appropriate to the practice of chemistry and to give opportunity to students to work on problems that have practical significance.

CHEM 7210 Analytical Process and Applied Statistics (2,2,0) (E)

Prerequisite: Postgraduate standing
The objective of this course is to help the students to develop an analyst's approach to solve chemical analytical problems by equipping them with important basic tools including statistics, sampling and analytical planning, data treatment and interpretation, and experimental design.

CHEM 7220 Chemical Instrumentation (2,2,0) (E)

Prerequisite: Postgraduate standing
Important concepts and developments in chemical instrumentation will be introduced. The student will acquire a better appreciation of the capabilities and limitations of these new tools which will help them make better choices of instruments and methods in real life analytical problems. The material in this course will be updated from time to time to reflect the most recent trend in instrument development.

CHEM 7240 Analytical Spectroscopy (2,2,0) (E)

Prerequisite: Postgraduate standing
This course reviews the basic principles of modern spectroscopy and their applications at an advanced level. Emphasis is laid on the instruments used most commonly in elemental analysis (atomic spectroscopies) on the one hand and those for the analysis of molecular and ionic species in solution (optical spectroscopies) on the other.

CHEM 7250 Laboratory Management (2,2,0) (E)

Prerequisite: Postgraduate standing
The objective of this course is to introduce concepts of quality assurance, issues pertaining to laboratory management, basic principles of experimental design and chemometrics, and methods for efficient management of analytical laboratories.

CHEM 7270 Electroanalytical Chemistry (1,1,0) (E)

Prerequisite: Students of MSc in Analytical Chemistry
This course illustrates the basic principles and applications of modern electroanalytical methods at the advanced level.

CHEM 7280 Surface Analysis (1,1,0)

Prerequisite: Students of MSc in Analytical Chemistry
This course provides a detailed treatment of surface analytical techniques, such as XPS, AES, SEM and EDX. Applications of these techniques in the studies of heterogeneous catalysis, polymer, semiconductor, material corrosion, etc. will be demonstrated to the students.

CHEM 7331-2 Dissertation (3,*,*)

Prerequisite: Students of MSc in Analytical Chemistry
A 15-month (part-time) dissertation on an analytical related topic is to be completed independently by each candidate under the supervision of faculty members in the Department of Chemistry or in conjunction with qualified scientists or experts in industrial, government, or other testing laboratories.

CHEM 7340 Environmental Analysis and Monitoring (1,1,0)

Prerequisite: Students of MSc in Analytical Chemistry
This course provides students with conceptual information, general principles and practical utility of important environmental sampling and analysis techniques most commonly used in environmental research and pollution control.

CHEM 7350 Sample Pretreatment Methods (1,1,0) (E)

Prerequisite: Postgraduate standing
This course introduces the principles and applications of traditional and modern sample pretreatment methods, including

Soxhlet extraction, microwave extraction, pressurized liquid extraction, supercritical fluid extraction and solid-phase microextraction. Emphases will be placed on the sample pretreatment of herbal materials and foods.

CHEM 7380 Food Safety Analysis (2,2,0)

Prerequisite: Postgraduate standing
This course addresses the principles and applications of various analytical tools in food safety analysis. Most up-to-date analytical techniques for food safety monitoring with local relevance will be discussed in details.

CHEM 7390 Separation Science (3,3,0) (E)

Prerequisite: Postgraduate standing
This course provides a systematic study of the modern techniques of gas chromatography, high-performance liquid chromatography, ultra-performance liquid chromatography and capillary electrophoresis. Emphasis will be placed on the theory, principle and application of these analytical separation techniques to real-world chemical analysis.

CHEM 7401-2 Seminar I & II (0.5,*,0)**CHEM 7403-4 Seminar III & IV (0.5,*,0)**

Prerequisite: Postgraduate standing
Regular seminars will be organized which must be attended by MSc students. Speakers from outside or inside institutions and industries who are experts of a particular field will deliver lectures on the topics of food analysis, drug analysis, and environmental analysis, etc. This will enlighten students on current trends and developments in chemical analysis, in analytical problems of global and local interests.

CHEM 7411-2 Advanced Analytical Laboratory (2,*,*)

Prerequisite: Students of MSc in Analytical Chemistry
These courses aim to provide thorough hands-on experience for students to perform and understand modern analytical instrumentation.

CHEM 7420 Mass Spectrometry Analysis (1,*,*) (E)

Prerequisite: Postgraduate standing
This course aims to provide students with in-depth knowledge on mass spectrometry and its application for environmental analysis, pharmaceutical analysis, bioanalysis and food analysis.

CHEM 7430 Pharmaceutical and Traditional Chinese Medicinal Analysis (1,*,*) (E)

Prerequisite: Postgraduate standing
This course aims to provide students with in-depth knowledge on selected topics in pharmaceutical and traditional Chinese medicinal analysis.

CHEM 7440 Bioanalysis (1,1,0)

Prerequisite: Postgraduate standing
This course intends to introduce students to methods that are used to analyse compounds of biological importance. Principles of modern bioanalytical techniques that are used to measure biomolecules and techniques that use biological processes for analyte detection will be discussed. Students will gain an overview of current advancements in bioanalysis.

CHEM 7450 Chemosensor and Biosensor (1,1,0)

Prerequisite: Postgraduate standing
Introduction to the field of chemosensor and biosensor, as well as an in-depth and quantitative view of the sensor design and performance analysis. Fundamental application of chemo/biosensor theory will be demonstrated including recognition, transduction, signal acquisition, and post processing/data analysis. Topics are selected to emphasize biomedical, bio-processing, environmental, and food safety application.

CHEM 7460 Forensic Analysis (1,1,0)

Prerequisite: Postgraduate standing
The course intends to introduce students the concept of forensic analysis using various daily-life scenarios. In particular, modern
