Prerequisite: Year IV standing

The student project is a valuable integrative element in the BSoSc curriculum, providing a focus for the application of knowledge acquired from core and major courses. The project provides an opportunity for students to apply the knowledge and skills gained on the degree programme to a real and practical economic issue related to China, and to prepare themselves for the transfer from the academic to the work situation.

CHSG 1005 Geography and the Contemporary (3,3,0) World

The course deals with the complex physical and cultural realities of the world. It adopts a topical approach, encompassing major issues in the contemporary world and studies these issues from a geographical perspective. It is designed in a manner that helps students to understand the varied and complex environmental interactions of the Earth. The course also assists students in recognizing the diverse ways in which geography can open new horizons and contribute to the building of an environmentally and culturally sustainable world.

CHSG 2025 Hong Kong and the Pearl River (3,2,1) Delta: A Survey

This course provides a comprehensive and lively guide to the history, culture, geography and economic development of South China. This objective is to be achieved by a series of wellorganized lectures and tutorials. Field trips, both in Hong Kong and to the Pearl River Delta, which will provide an invaluable onsite experience to elaborate the types and magnitude of change in South China discussed in lectures, may be organized. It is hoped that this course will constitute an essential gateway to those wishing to acquire a deeper understanding of this dynamic corner of Asia.

CHSG 3006 Regional Geography of China (3,3,0) This is an introductory course on the geography of China. A regional approach is employed to provide students a comprehensive collection of topics over the physical setting, natural resources, population, urban and regional development, industrial and agricultural development, administrative system and geopolitics. These topics span across the time period before and after the country launched its economic reform. This course covers not only topics on social, economic and environmental issues, but also introduces a perspective to understand these activities and their changes.

CHSG 4016Energy Development in China(3,3,0)Prerequisite:GEOG 3007 Energy Problems and the
Environment or consent of the instructor

Energy used to be a serious bottleneck in the economic development of China in the 1980s when the country first opened up to the outside world. In the past three decades, momentous changes occurred in the Chinese energy sector, including changes in the institutional framework-moving from state allocation to the market economy-and with respect to individual energy industries. By the mid-1990s, the problem of energy shortage had largely been resolved (which re-appeared in another form lately), yet the country had become a net oil importer, and is projected to import an increasingly larger amount in the future, with serious implications for the security of energy supply and future oil import outlay. The course takes a comprehensive survey of the Chinese energy sector, including the resource endowment, energy policy since the 1980s, the major energy industries like oil, coal, natural gas, electricity-HEP and nuclear included-and the international energy trade of China. Current issues such as the West-East Pipeline and looming energy security issues are also dealt with.

CHSG 4047 **Resource Management in China** (3,2,1) This course introduces the concepts, knowledge and skills in natural resource evaluation and management, with the emphasis the real-world cases in China. The course is presented in two major parts. The first part begins with the introduction to the concepts about the natural resources and their distribution in China. This is followed by an extensive study on methodology for land and water resource evaluation. The second part presents details about the nature, distribution and utilization of natural resources in China. Environmental conservation and sustainable development in relation to natural resources are also discussed. Laboratory work for this course focus on resource assessment methods with the aid of remote sensing and geographical information system (GIS) technology.

CHSG 4055 Rural and Agricultural (3,2,1) (C) Development in China

This course employs a geographical perspective to investigate issues concerning rural and agricultural development in contemporary China. Focus is put on the social and economic spheres and how the dynamics of change since 1978 have affected these spaces. A variety of spatial variations on development experiences are investigated to show how space makes a difference.

CHSG 4056 Selected Topics in the Geography (3,3,0) of China (Human Geography)

This course involves an in-depth study of selected issues in the contemporary geography of China. The major socio-economic topics or physical/environmental topics to be discussed have been intentionally designed to be flexible.

CHSG 4057 Selected Topics in the Geography (3,3,0) of China (Physical and Environmental Geography)

This course involves an in-depth study of selected issues in the contemporary geography of China. The major socio-economic topics or physical/environmental topics to be discussed have been intentionally designed to be flexible.

CHSG 4085 Urban Development in China (3,3,0) This course introduces students to China's immense urban transformation process. The course is divided into three parts. Part A briefly reviews the urbanization process. It deals with questions such as the nature of the urbanization process before and after reform, and the question of hukou and rural to urban migration. Part B is on the internal structure of Chinese cities, focusing on urban land development. China's changing land use structure will be studied from various theoretical and methodological perspectives. Part C deals with on China's urban housing. The changing pattern of housing consumption is analysed in light of changing institutional contexts and China's phenomenal economic growth.

CHSG 4898-9 Honours Project

Prerequisite: BSocSc (Hons) in China Studies Year IV standing This is a required course, which provides an opportunity to synthesize data. Students are expected, under the guidance of teaching staff, to conduct a study on an aspect of Chinese geography. This involves the identification of a research problem and a chance to understand relevant methodological and theoretical issues. Proper use of field and secondary data, adequate citation of the literature, and the writing of a research report are important ingredients of the research process.

CHSH 1105 China in the Imperial Age (3,2,1) (C) This course is designed for students who have just declared history as their major field of study. As a foundation course for history students it will introduce two major ways to read imperial Chinese history: by period and by topic. A key strength of this course is that students will look beyond political history. The
