POLS 2110 Statistical and Survey Methods for Political Science (3,2,1)

Prerequisite: POLS 1510 Foundations of Political Science
The 20th century has been described as the age of statistics and modern political research increasingly demands familiarity with the means by which statistically based claims and policy decisions have been developed and advanced. Quantitative analysis also provides new means to describe and analyse social phenomena. In conjunction with qualitative and disciplinary approaches (i.e. historical, economic, psychological, sociological, etc.), quantitative analysis comprises an essential aspect of the discipline of political science. A key aspect of quantitative applications in the social sciences has been survey research, ranging from market research to opinion polling and quality of life surveys. This course provides an introduction to descriptive and inferential statistics and survey design, administration, analysis and theory. Critical understanding of the problems of analysis posed by quantitative databases, qualitative assessment and questionnaire development, and the proper presentation and explanation of quantitative data and its limitations provide primary purposes of the course. This course is open to GIS majors and GIS minors (Year II standing) only.

For GIS majors: POLS 1120 Introduction to Political Economy, POLS 1510 Foundations of Political Science and POLS 2130 Foundations of International Relations

The global political economy is in many ways not a new phenomenon. Imperialism in the form of single nation-states dominating sub-national areas began to impose forms of government and economic regulation worldwide as early as the 18th century. Yet, even so, one could argue that these nation-state empires were relatively isolated global regionalisms until the mid-20th century. Only in the post-World War II period could a more or less voluntary, systematic, and global framework of political and economic relations begin to develop which, while recognizing the nation-state, nevertheless also sublimated it to international protocols and behaviours, and since the end of the Cold War in 1991 the process has accelerated. Today the isolated nation-state has lost much of its sovereignty to the international political economy. This course examines that process and the actors which have developed, or are developing, the international

political economy. Challenges to the global international political economy are raised and potential dangers and opportunities examined. This course is open to GIS and European Studies majors only.
